**Added Features  
to S/W Version 2.1**

## Added Features to S/W Version 2.1

### 1. Extra Supplementary Services Support from the POTS Interface

#### A. Hot Line (HL)

- \*53\**number*# activation (The time supervision timer for activating the automatic call is 10 sec)
- #53# deactivation

#### B. Connected line Restriction (COLR)

- \*77# activation
- #77# deactivation

#### C. Calling line identification Presentation

- \*B5# activation
- \*B5# deactivation

This service was supported from older S/W versions, but the activation/deactivation procedure was implemented only with AT commands.

### 2. New Features

A. Permanent storage of all definitions made via the Keypad of analogue telephone sets regarding the Supplementary Services

B. Definition of own phone number from the Keypad of an analogue telephone set \*90\**number*# Definition of own phone number

C. Capability to view the profile settings using the command AT&Vn, when

- *n=0* view active profile settings
- *n=1-4* view the (n-1) user profile settings
- *n=5* view factory profile settings

### 3. Enhanced S/W for ML-PPP Function and Data Calls

### 4. Enhanced S/W for ISDN Layer Activation
